Rationale

My color scheme was inspired by a picture that I took of neon paint pens written on a black wall. I thought this color scheme could work well because the contrast of black and white provide for readable text that works at any size. The three other colors give me multiple options to add pops of color and make my website standout and be unique.

The main font that I chose to use is Brisbane. This font family is a sans serif that has multiple options for weight of characters. This works well for my website because it looks good and is very legible on a darker background. This font will work especially good for any body text.
